

BIPOLAR IONIZATION IS MAKING YOU EVEN SAFER

TALON PURE AIR QUALITY TECHNOLOGY

Bipolar Ionization

We previously communicated that we are investing in a array of changes to increase safety as it pertains to how air travels through the buildings. The amount of fresh air was addressed through our building controls system and the level of air filtration was maximized by transitioning to MERV 13 higher density filters.

We have now installed bipolar ionization technology in common area gathering spaces. Bipolar ionization technology releases charged atoms that attach to and deactivate harmful substances like bacteria, mold allergens, and viruses. The technology is integrated into HVAC systems. It is widely used in food manufacturing and more recently medical applications such as John's Hopkin's Children's Hospital.

We have installed bipolar ionization units in the following amenities spaces: Training Room, Board room, Fitness Center, and Dilettante Mocha Café. Additionally, we are evaluating using the technology in other areas throughout the buildings.

Our desire to keep health and wellness at the forefront has driven us to keep testing and implementing new ideas and technologies. We will continue to do so and will keep the updates coming!
